

FOR IMMEDIATE RELEASE

Webinar: RPA Zero to Hero: How to Rescue Your Bots with System Soft Technologies

5 fast and smart ways business leaders can get real value from their Robotic Process Automation investment to hit revenue goals quickly and effectively during challenging times with less staff

TAMPA, FL—October 1, 2020—[System Soft Technologies](#) (SSTech), a leader in enterprise IT services, solutions and products, today announced the company is hosting a webinar at 2 p.m. ET on Thursday, October 15, 2020, about how business executives and their organizations can achieve a cost-effective Robotic Process Automation (RPA) implementation, even with a lack of capacity and capability during uncertain economic times.

“Many leaders see the need to put in place RPA to meet their company’s strategic goals right now,” said Stephen Moritz, Chief Digital Officer, System Soft Technologies, and webinar presenter. “In our upcoming webinar, we will answer the questions of those that have not yet started using RPA and don’t know where to begin. But, we will also show those who have already begun their RPA journeys how to avoid problems with their implementations and take advantage of best practices to scale.”

A recent Forrester survey shows up to 80% of RPA programs do not hit ROI targets because companies get stuck after deploying just a few bots. And, for those that commit to broad RPA programs, Deloitte says longer-than-anticipated bot implementations have delayed ROI.

Join Moritz and SSTech RPA expert Rajesh Patil as they focus on the top five reasons RPA efforts fail and how to proactively mitigate risks and overcome challenges for each. Those failures, with ways to beat them, include:

- Failure #1: Improper technical and infrastructure setup
- Failure #2: Inadequate implementation of a Center of Excellence concept or Operating Model setup
- Failure #3: Not following bot development and implementation of best practices
- Failure #4: Lack of skills and integration with IT strategy and resources
- Failure #5: Unclear strategic vision and evangelization of RPA
