

FOR IMMEDIATE RELEASE

Webinar: A Revolutionary Move to Microservices with System Soft Technologies

5 steps to put microservices in action for business agility, efficiency, resiliency and more revenue as business leaders lean on IT to increase productivity, stay competitive and drive customer experiences

TAMPA, FL—November 10, 2020—[System Soft Technologies](#) (SSTech), a leader in enterprise IT services, solutions and products, today announced the company is hosting a webinar at 2:30 p.m. ET on Thursday, November 12, 2020. The webinar—“Retiring the Monolith: A Revolutionary Move to Microservices Is in Your Near Future”—focuses on how IT professionals can provide better, faster and more reliable services through microservices over monolith architecture to meet growing, critical business needs.

“Many organizations are following the lead of business pacesetters to develop a strong microservices strategy, because they must address crucial business challenges with agility, efficiency, resiliency and more revenue generation,” said Don Bilbrey, Senior Solutions Architect, System Soft Technologies, and webinar presenter. “We will cover the building blocks for giving life to microservices, providing an understanding of containers, APIs and scalable cloud infrastructure. This path is designed to help organizations get products to market faster and create a powerful debugging plan.”

A recent O’Reilly report shows that 77% of organizations surveyed have been influenced by microservices stalwarts Amazon, Facebook and Google to adopt microservices, with 92% experiencing success. Microservices is projected to grow globally at a 22.5% rate through 2025.

“With projections like that, microservices over monolith architectures must be carefully considered,” Bilbrey added.

Join Bilbrey and SSTech Senior Software Architect Anil Macha as they provide foundational direction, real-world scenarios and a demo to help IT leaders better explore the idea of moving to microservices and specifically learn about the single responsibility principle, isolation, autonomy, data encapsulation and inter-process communication.
