Webinar: Achieving Observability for Security at 80% Reduced Cost by System Soft Technologies

A case study in how Innominds—a product engineering firm—gained full security coverage at less cost, while collecting all data and reaching full stack observability with Elysium Analytics platform

TAMPA, FL—May 18, 2021—[System Soft Technologies](#) (SSTech), a leader in enterprise IT services, solutions and products, today announced the company is hosting a webinar at 2 p.m. ET on Tuesday, May 25, 2021. The webinar—“Achieving Observability for Security at 80% Reduced Cost”—takes a deep dive into how Innominds, a product engineering firm in San Jose, California, gained full security coverage at 80% less cost, while collecting all its data and reaching full stack observability through Elysium Analytics, a leading cloud-scale data warehouse platform running on Snowflake.

“We are constantly hearing from organizations that can no longer afford to add more data to their legacy log management solutions and, as a result, are faced with the difficult decision to drop valuable data sources for security and observability use cases or search for a new and better solution,” said Jens Andreassen, CEO at Elysium Analytics and webinar presenter. “Augmenting or replacing a legacy solution with Elysium Analytics, built on Snowflake natively, is often the answer. Our webinar will show how our capabilities applied to all your data at a far lower cost with usage-based pricing allows you to put in place a no-compromise observability strategy.”

SSTech is a technology partner of Elysium Analytics, a data analytics and security company, which provides a single pane of glass, providing aggregated views of all users' and entities' activities across an enterprise.

Join Andreasen, Elysium Analytics Director of Analytics Christopher Berry, and Arun Kalasapudi, Director of Strategic Partnerships and Alliances at Innominds, to learn how Innominds is now collecting all its data and has unified observability at a lower cost, using the Elysium Analytics platform. An examination of this use case will help organizations solve their cost, overhead and scalability challenges and achieve unified observability.

The webinar panel will give a live demo of how Elysium Analytics helped Innominds:

- Achieve full security coverage at 80% less cost.
- Build a modern data collection pipeline with pre-built data connectors for faster onboarding.
- Enable all telemetry to be collected and kept.
- Support more endpoint detection and response (EDR) use cases.
- Get full stack observability at scale.
- Gain deeper insights across the application, network and infrastructure.
