

# Robotic Process Automation

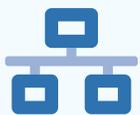

## with Microsoft Power Automate

**Improve workflow, save time and amp up productivity across your business.**

The business demand for workflow and process automation is higher than ever, as are the stakes. For those under threat from digitally disruptive competitors, the urgency is real.

System Soft Technologies, in partnership with Microsoft, empowers your organization to streamline repetitive tasks and paperless actions, so you can focus your attention where it is most needed and grow your business.

### **Integrate Apps Hassle-Free and Seamlessly**

You can bridge data sources through connectors, ensuring seamless communication across apps. It not only expedites deep integration with Microsoft products and tools, but also lets you connect to third-party apps to simplify your daily tasks.

### **Facilitate Data Access and Sharing**

With seamless data flow across different apps, Power Automate enables accessing and sharing of business data. For instance, you can create flows that automate repetitive work tasks and trigger directly from your Microsoft Teams data.

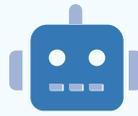

### **Enable Quick and Safe Automation**

Your employees can build secure workflows quickly and easily with no-code experience. Power Automate is equipped with ready-to-use templates and recommendations, allowing them to transform manual processes into automated workflows, processing human-driven communication with software frameworks, which do not support API automation.

## Enable Custom Connectors Creation

You can link apps and design a workflow that sends you a notification, which can help track customer satisfaction rates for potential trend identification and business opportunities.

## Smart Workflows, Boosting Productivity and Efficiency

Power Automate features pre-assembled intelligence capabilities that enable automation of tedious manual tasks, alleviating the need to enter data by hand.

You can automate manual tasks by building workflows for single tasks and for large-scale systems, both with ease and time savings.

## Design App Logic and Guide Users with Processes

Power Automate lets you automate workflows based on pre-selected events or a scheduled time. These can be scheduled or designed to get data back to the app, displaying information to your users.

Multi-stage workflows help ensure data consistency and keep your users on track.
