# Reduce Risk and Ensure Organizational Resilience

**with System Soft Security Assessments**

**Improve your security posture and defend against threats to maintain operational health and protect your organization's brand and reputation.**

System Soft Technologies is your trusted security advisor and solutions resource for modern security services, technologies and expertise for reducing infrastructure risks, application risks and vulnerabilities to support compliance, mitigate threats and improve cyber-resilience.

Our end-to-end security solutions help you confidently identify risks and defend your business against security threats, protect sensitive information, secure the devices that connect your data, and meet regulatory requirements.

## Business Awareness and Resilience Is Key to Securing Sensitive Data and Avoiding Breaches

### Identify Vulnerabilities

System Soft's vulnerability and cyber security assessments provide a complete evaluation of existing and potential vulnerabilities within your organization to enhance your security posture. Our services include identifying weaknesses and testing threat agents ability to compromise your network, testing your organization's security policy compliance, and ensuring your organization can quickly identify and remediate cyber security incidents.

### Defend Against Cyber Threats

System Soft's team of seasoned security experts and network of reputable security partners are ready to help you defend against the millions of threats facing organizations every day, while also meeting regulatory cyber security requirements.

### Protect and Secure Sensitive Information

System Soft specializes in helping businesses manage and secure company data.
Our priority is helping you keep your sensitive data where it belongs and as secure as possible.

System Soft's comprehensive security solutions and services are designed to help you navigate today's evolving security risks and regulations, while helping you stay secure and compliant, and lowering your risk profile, so you can focus on higher value-added activities.

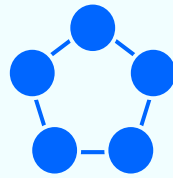

### Vulnerability Assessment and Penetration (PEN) Testing

- Identify known vulnerabilities and configuration issues
- Perform real-world attack simulations
