

Scale Data and Increase Security Performance

with the Elysium Analytics Security-as-a-Service Platform

Secure your data using a single cloud-scale data lake model and increase visibility of events and metrics to identify anomalies with full context for faster resolution.

Sophisticated cyber security attacks target your unexploited attack surfaces, leaving SOCs unable to detect and respond through existing legacy solutions. These solutions have separate data silos, with no sharing between applications, infrastructure and security tools and no single solution accessing all your data relevant to an attack.

System Soft's Elysium Analytics Security-as-a-Service platform empowers you to ingest large volumes of data from multiple security sources, application logs and infrastructure logs, and unifies this data into a single cloud-scale data lake model for a holistic view of your data.

Avoid Security Blind Spots

Retaining all logs and security events have proven to be critical, avoiding security blind spots, providing full observance of the network and assuring compliance.

Achieve Full Visibility

The Elysium Analytics security platform enables the collection of all log types with full-text search, rich visualizations and out-of-the-box advanced analytics for all Observability use cases.
